

Risk management

Workshops for Product Development teams

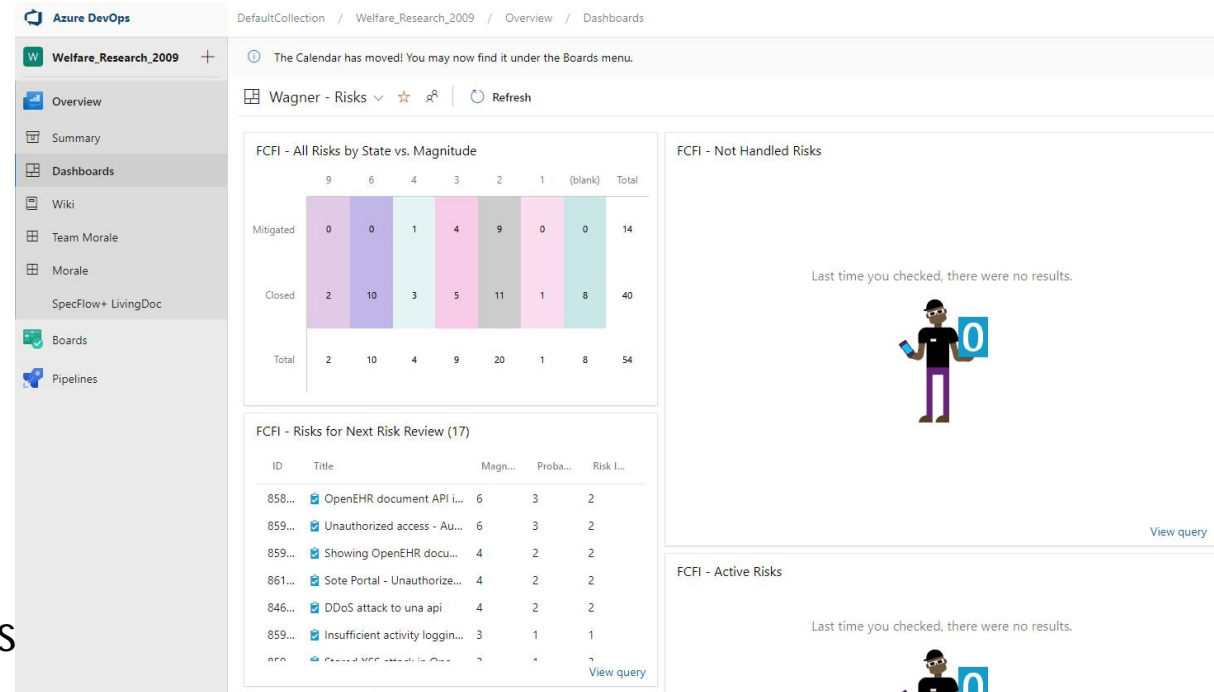

Paweł Sukiennik
Paweł Żal

Final exercise

1. Register your projects risks in your Azure DevOps.

- define risks noticeable from developers' perspective
- think about your infrastructure, backlog, designs, end users, milestones, timelines, security, and any other important aspects

2. Add a Risk Dashboard to your project in ADO. You can use:

Wagner -Risks as an example.

- It will allow you to manage and see your risk with a better visibility
- You will have your project overview from the Risk Management perspective

Thank you
